Venous Thromboembolism Risk Factor Assessment

Patient's Name:	_ Age:	Sex:	_ Wgt:	lbs Joseph A. Caprini, MD, MS, FACS, RVT
-----------------	--------	------	--------	--

Choose All That Apply

Each Risk Factor Represents 1 Point

- □ Age 41-60 years
- Minor surgery planned
- ☐ History of prior major surgery
- Varicose veins
- □ History of inflammatory bowel disease
- □ Swollen legs (current)
- □ Obesity (BMI >30)
- □ Acute myocardial infarction (< I month)</p>
- □ Congestive heart failure (< 1 month)
- □ Sepsis (< 1 month)
- Serious lung disease incl. pneumonia (< 1 month)
- □ Abnormal pulmonary function (COPD)
- Medical patient currently at bed rest
- Leg plaster cast or brace
- Other risk factors

Each Risk Factor Represents 3 Points

- □ Age over 75 years
- Major surgery lasting 2-3 hours
- □ BMI > 50 (venous stasis syndrome)
- □ History of SVT, DVT/PE
- □ Family history of DVT/PE
- Present cancer or chemotherapy
- Positive Factor V Leiden
- □ Positive Prothrombin 20210A
- □ Elevated serum homocysteine
- Positive Lupus anticoagulant
- □ Elevated anticardiolipin antibodies
- □ Heparin-induced thrombocytopenia (HIT)
- Other thrombophilia

Type	
------	--

Each Risk Factor Represents 2 Points

- □ Age 60-74 years
- Major surgery (> 60 minutes)
- □ Arthroscopic surgery (> 60 minutes)
- □ Laparoscopic surgery (> 60 minutes)
- Previous malignancy
- Central venous access
- □ Morbid obesity (BMI >40)

Each Risk Factor Represents 5 Points

- □ Elective major lower extremity arthroplasty
- ☐ Hip, pelvis or leg fracture (< 1 month)
- □ Stroke (< 1 month)
- □ Multiple trauma (< 1 month)
- Acute spinal cord injury (paralysis)(< 1 month)
- □ Major surgery lasting over 3 hours

For Women Only (Each Represents 1 Point)

- Oral contraceptives or hormone replacement therapy
- □ Pregnancy or postpartum (<1 month)
- □ History of unexplained stillborn infant, recurrent spontaneous abortion (≥ 3), premature birth with toxemia or growthrestricted infant

Total Risk Factor Score

Please see Following Page for Prophylaxis Safety Considerations

Revised November 4, 2006

VTE Risk and Suggested Prophylaxis For Surgical Patients

Total Risk Factor Score	Incidence of DVT	Risk Level	Prophylaxis Regimen	Legend	
0-1	<10%	Low Risk	No specific measures; early ambulation	ES Floatio Stockings	
2	10-20%	Moderate Risk	or LWMH (<3400 U)	 ES - Elastic Stockings IPC - Intermittent Pneumatic Compression LDUH - Low Dose Unfractionated Heparin LMWH - Low Molecular 	
3-4	20-40%	High Risk			
5 or more	40-80% 1-5% mortality	Highest Risk	Pharmacological: LDUH, LMWH (>3400 U)*, Warfarin*, or FXa I* alone <i>or</i> in combination with ES or IPC	Weight Heparin FXa I - Factor X Inhibitor	

*Use for major orthopedic surgery

Prophylaxis Safety Considerations: Check box if answer is 'YES'

Anticoagulants: Factors Associated with Increased Bleeding
☐ Is patient experiencing any active bleeding?
☐ Does patient have (or has had history of) heparin-induced thrombocytopenia?
☐ Is patient's platelet count <100,000/mm ³ ?
☐ Is patient taking oral anticoagulants, platelet inhibitors (e.g., NSAIDS, Clopidogrel, Salicylates)?
☐ Is patient's creatinine clearance abnormal? If yes, please indicate value
If any of the above boxes are checked, the patient may not be a candidate for anticoagulant therapy and you should consider alternative prophylactic measures: elastic stockings and/or IPC
Intermittent Pneumatic Compression (IPC)
☐ Does patient have severe peripheral arterial disease?
☐ Does patient have congestive heart failure?
☐ Does patient have an acute superficial/deep vein thrombosis?
If any of the above boxes are checked, then patient may not be a candidate for intermittent compression therapy and you should consider alternative prophylactic measures.
